Title>

Team Fast&Curious presents to you

INFOSHIELD-AI

AGENTIC AI SYSTEM FOR REALTIME FAKE NEWS DETECTION

Start

Title> **The-Problem>**

PROBLEM STATEMENT

- Rapid spread of FAKE NEWS on social media
- Difficult to verify real time and unknown news.

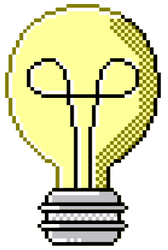
Existing systems: static dataset,no explanation,not realtime

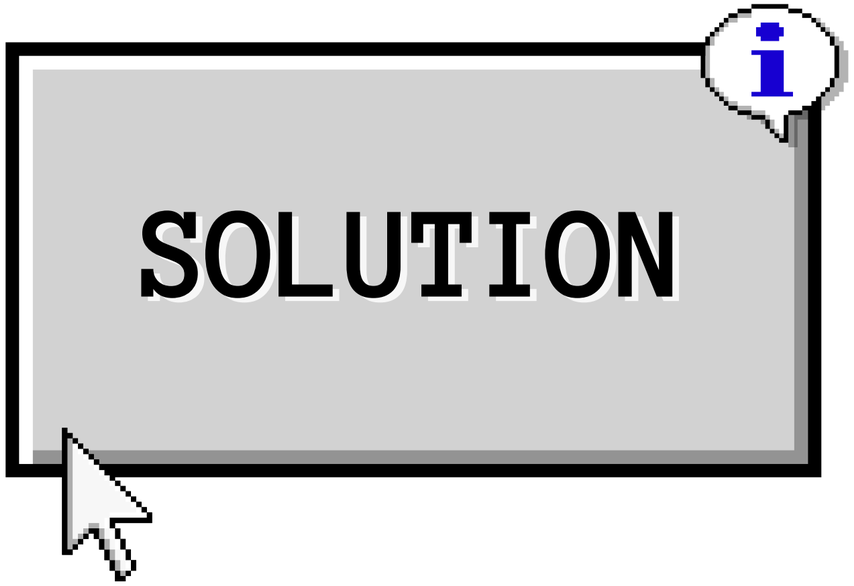
Need: Explainable real time ai system

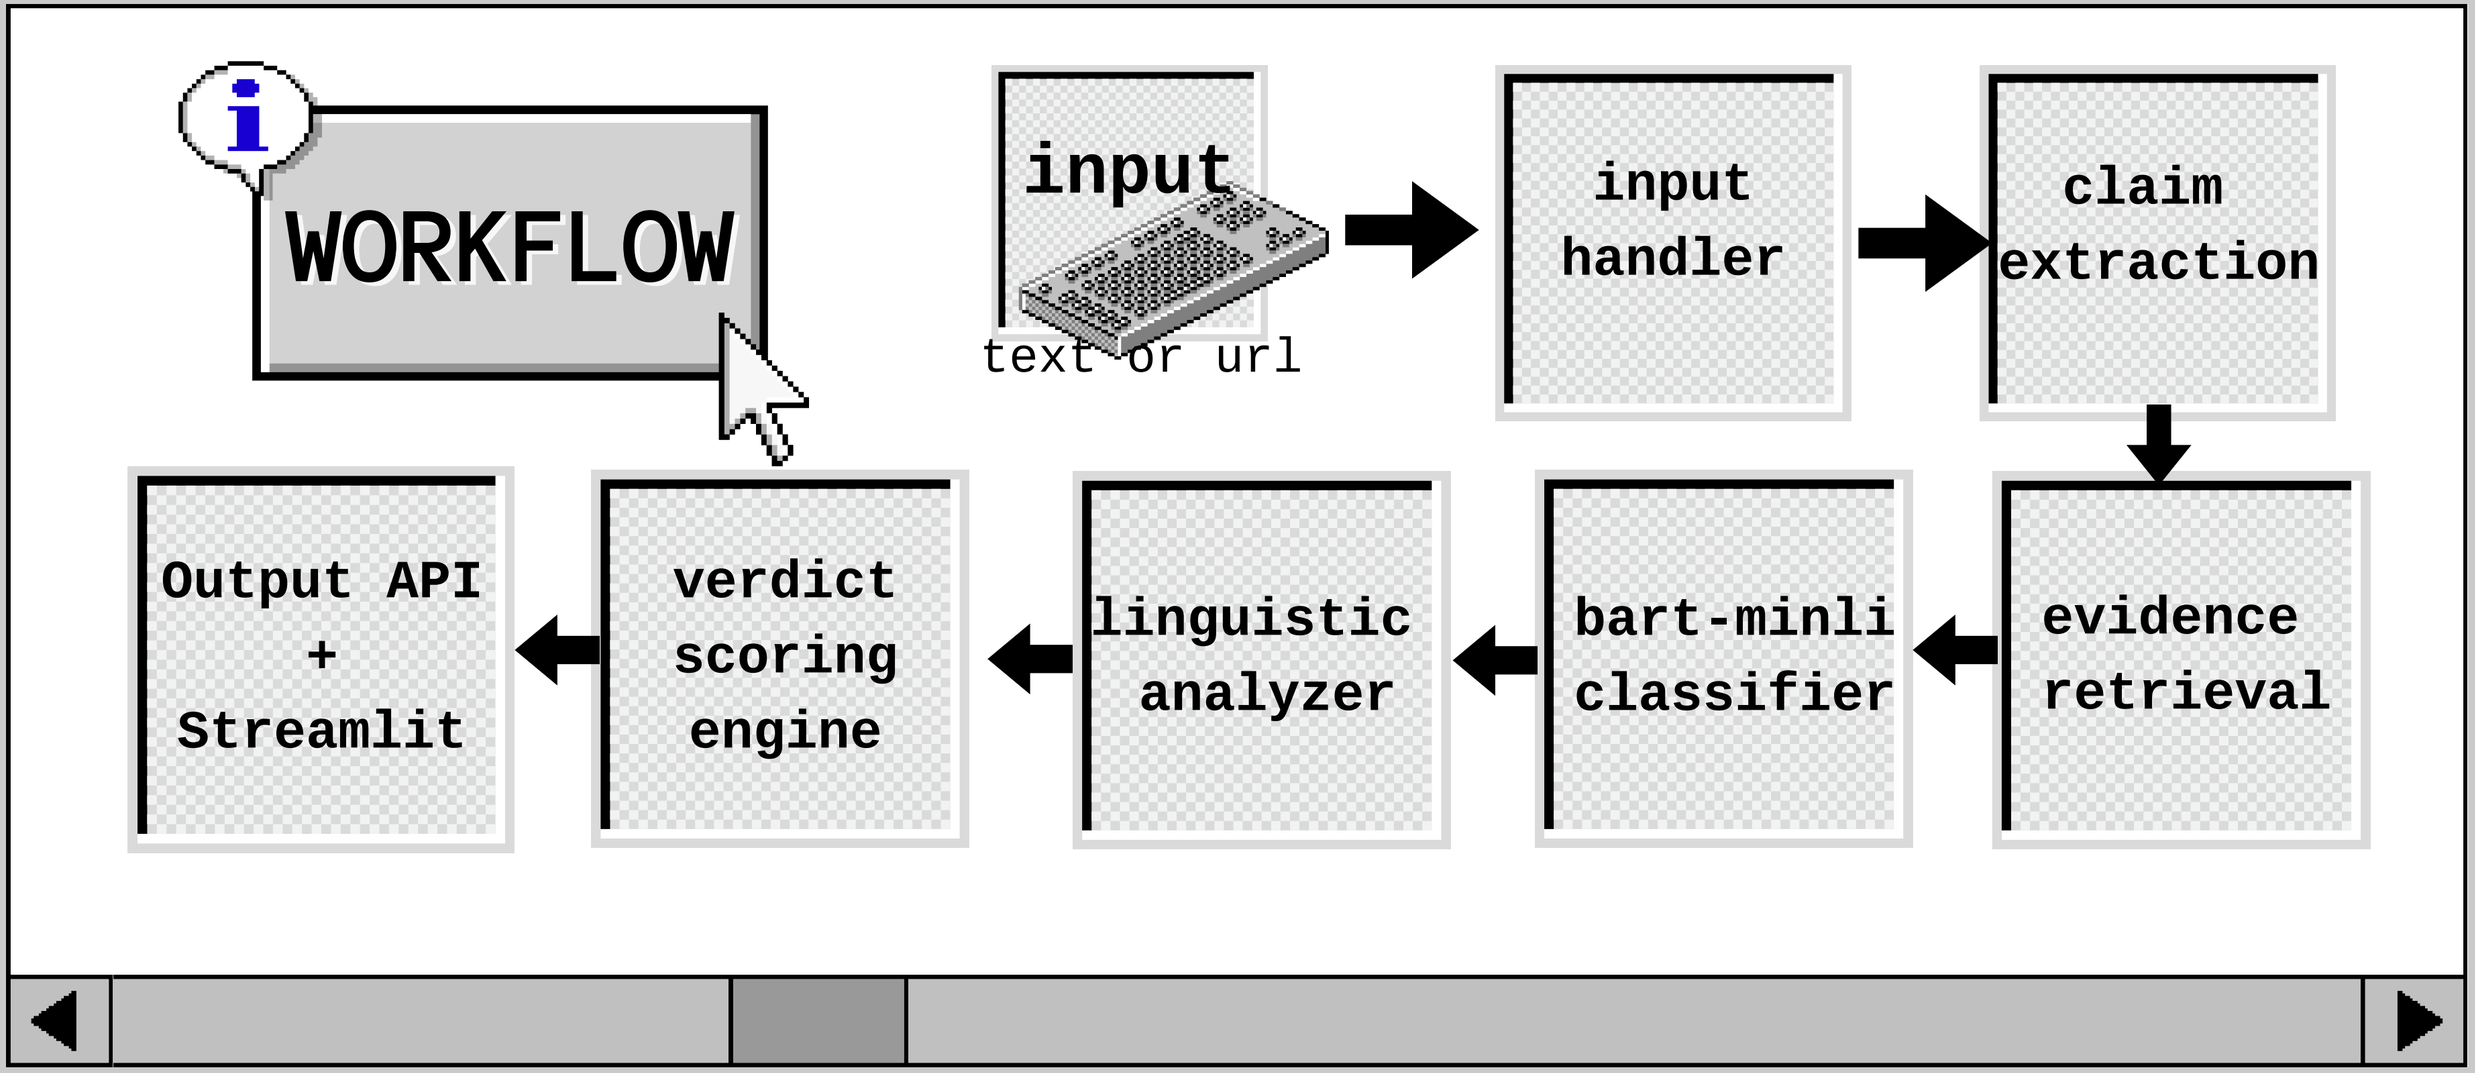
Inputs
- Direct Text
- News URLs
- Social Media (Reddit/YouTube)
- Screenshots (OCR)

System
- Agent-based pipeline (automated)

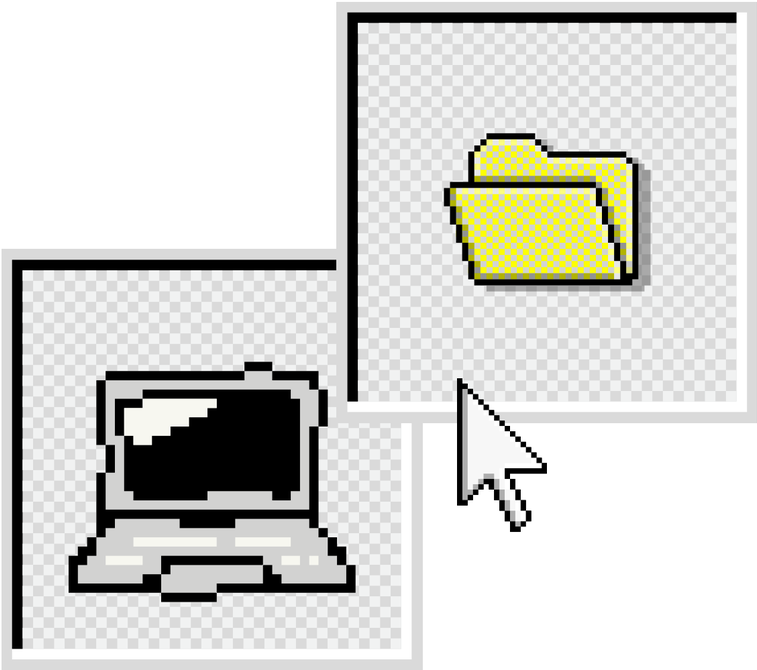
Outputs
- REAL / FAKE verdict
- Confidence Score
- Transparent





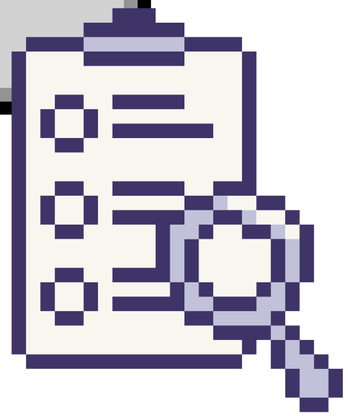


WORKFLOW
input
text or url
input handler
claim extraction
evidence retrieval
bart-minli classifier
linguistic analyzer
verdict scoring engine
Output API + Streamlit



TECHNOLOGIES USED

- Python
- Flask
- Streamlit
- HuggingFace Transformers
- BeautifulSoup
- Newspaper3k
- Tesseract OCR
- NLTK



VALUE PREPOSITION

EXISTING SYSTEMS
* Use sentiment models (WRONG logic)
* No linguistic validation
* Weak evidence matching
* No thresholds → noisy outputs

INFOSHIELD - AI
* **BART-MNLI (true classification)**
* **20+ linguistic heuristics**
* **IDF-weighted evidence retrieval**
* **Hard thresholds (robust decisions**

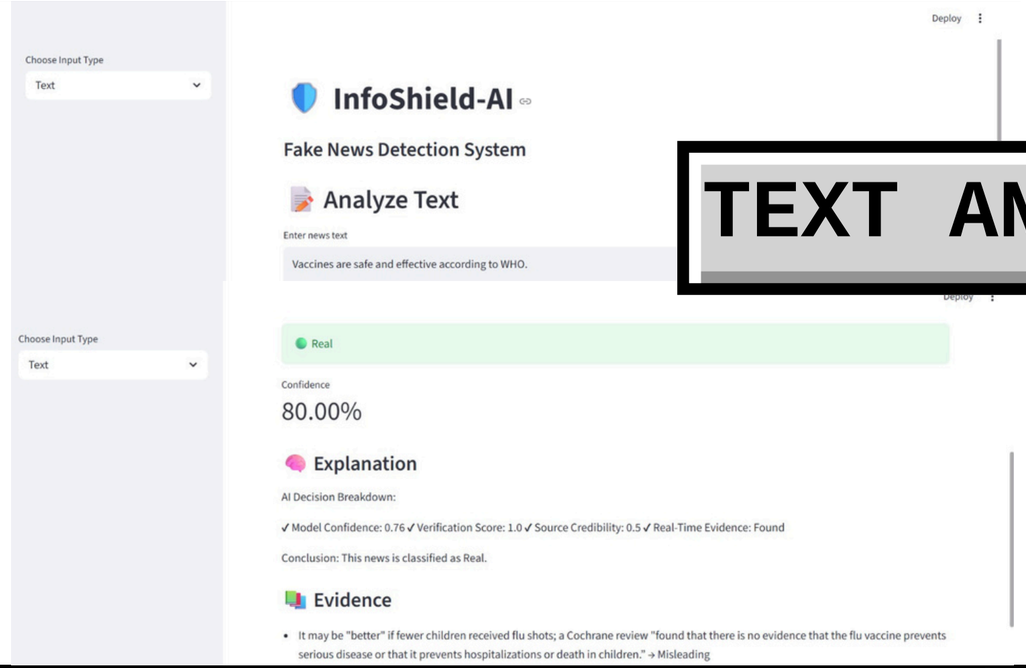
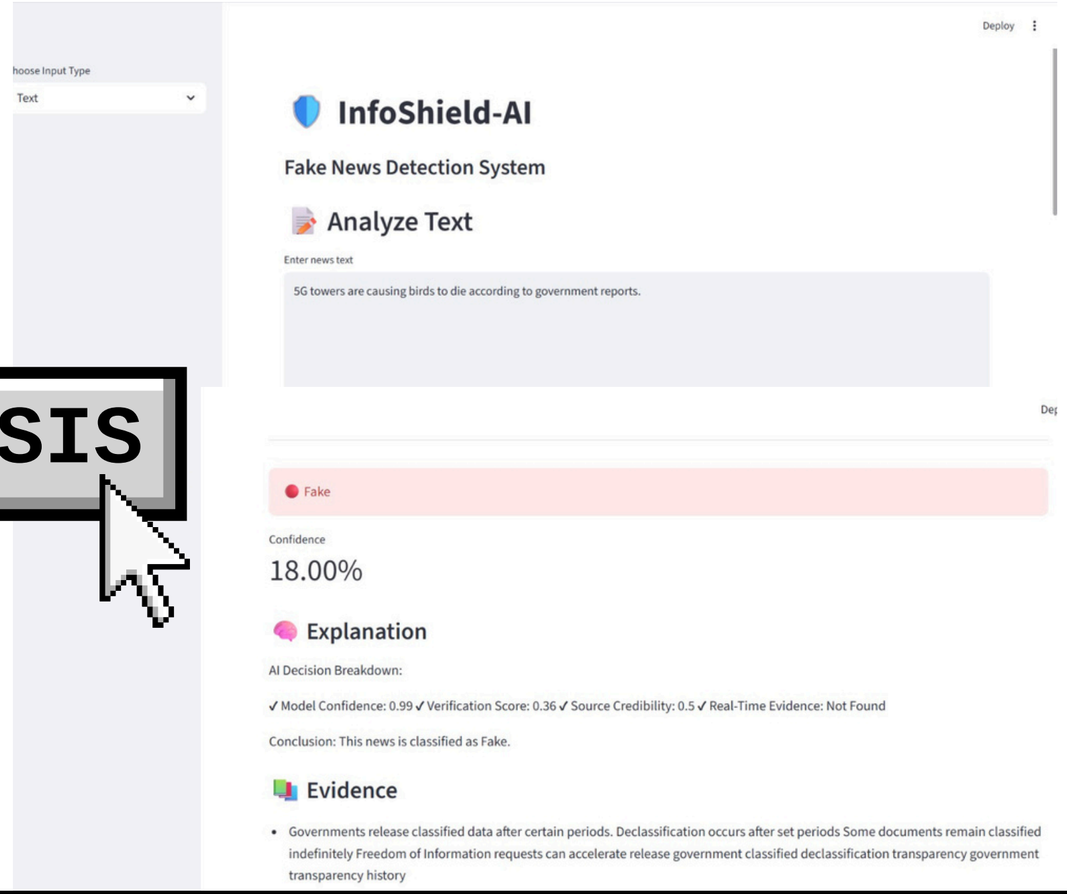
WORKING PROTOTYPE



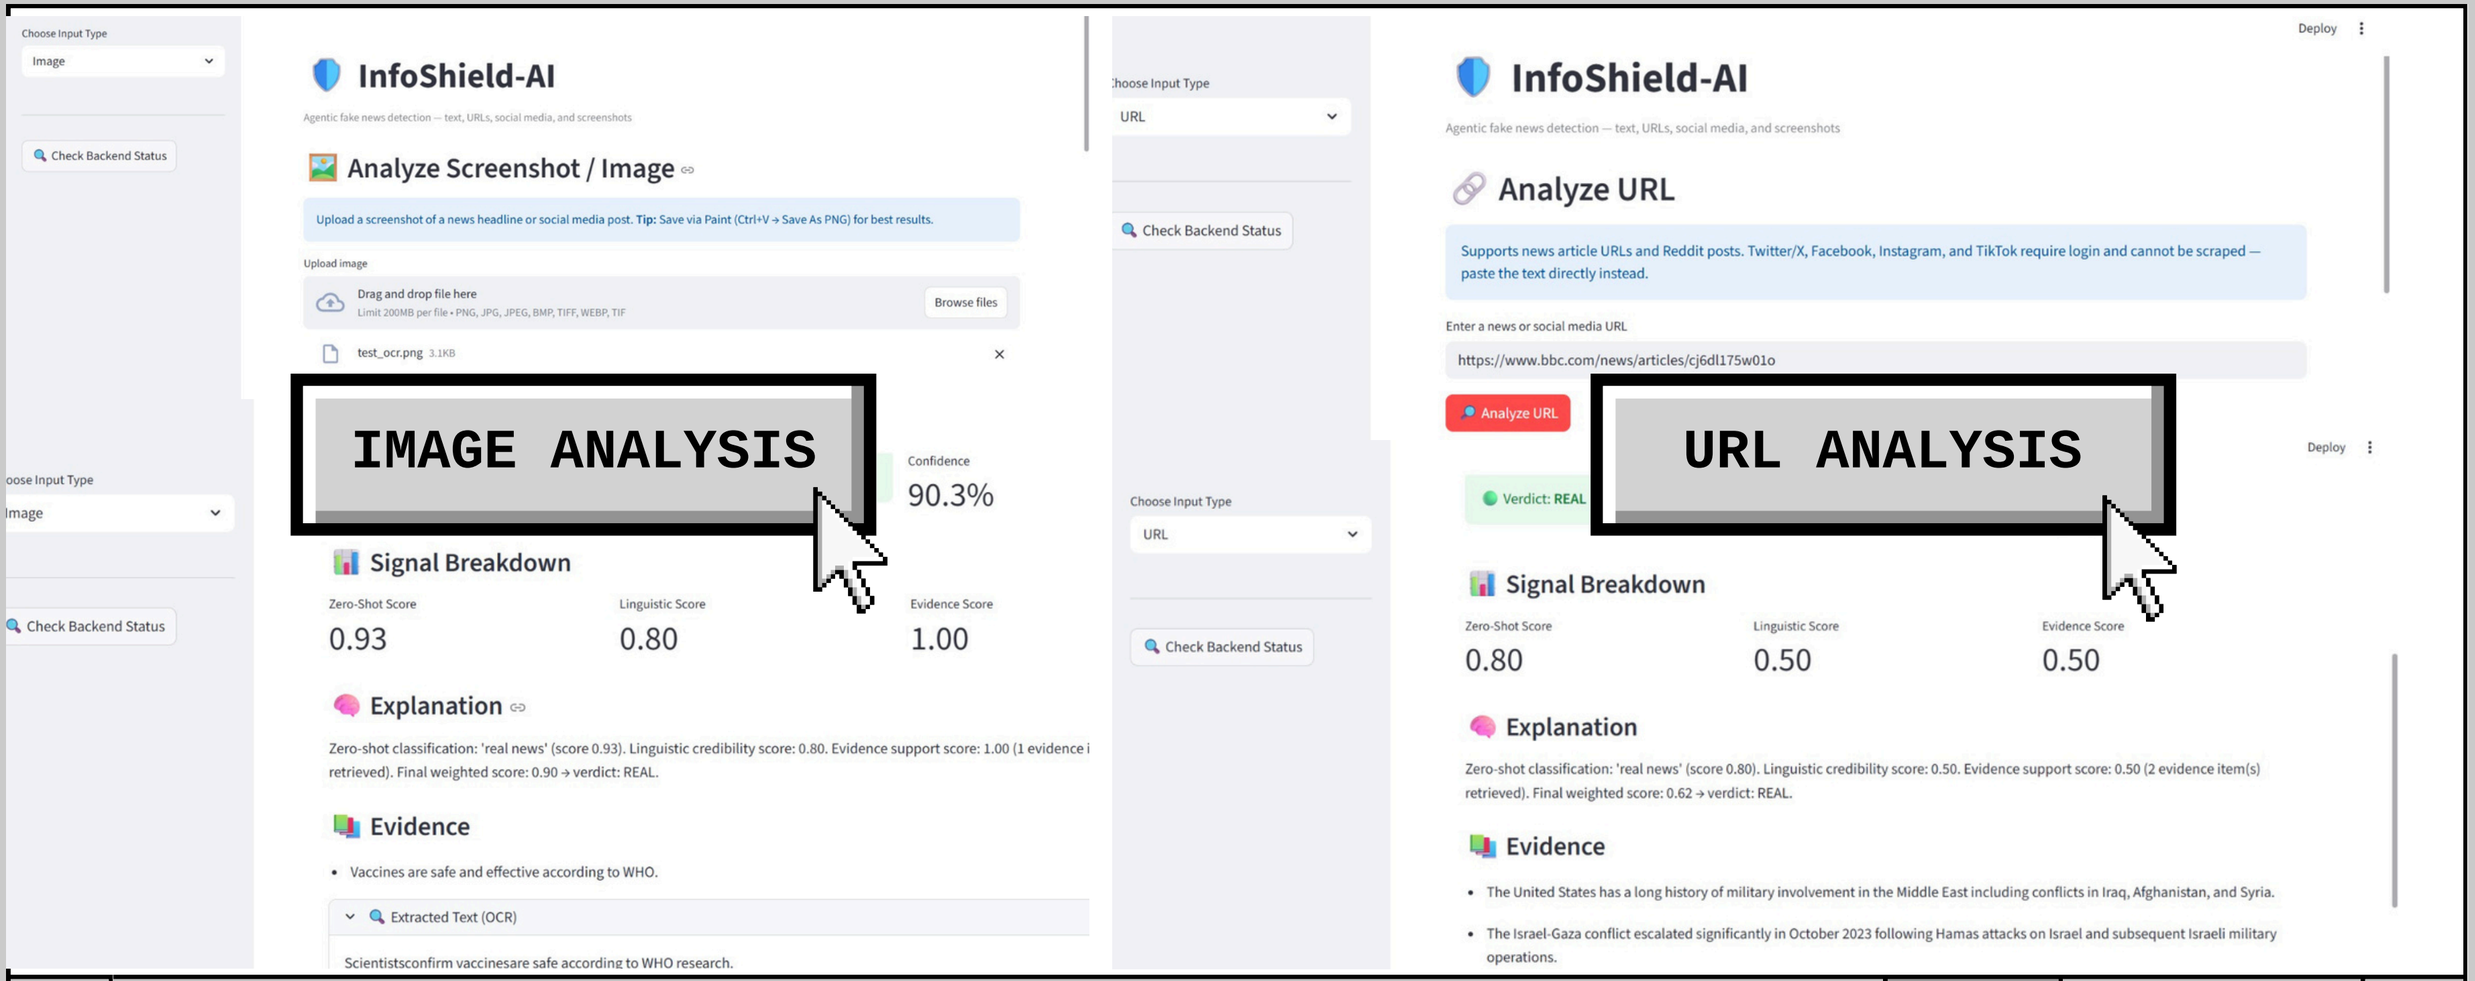
TEXT ANALYSIS



Team: Fast&Curious presents InfoShield-AI

..> Solution> Workflow> Tech-Stack> Uniqueness> **Demo>**

Working of the Solution (video demo)



LIMITATIONS

- Not fully trained on fake news dataset
- Depends on available evidence
- Social media API limits

LIMITATIONS AND FUTURE SCOPE

FUTURE SCOPE

- Fine-tuned ML model
- Database integration
- Mobile app
- Deployment (cloud)
- Browser extension

- Multi modal fake news detection system
- Combines AI + real-time verification
- Provides explainable ai

CONCLUSION

THANK YOU!
